Jeometrica by Luca Nichetto

BRAND **Scavolini**DESIGNER **Luca Nichetto**

Jeometrica is the new project **Scavolini**, designed by Luca Nichetto: a multi-purpose system that offers solutions for the kitchen, living room and bathroom to ensure stylistic consistency throughout the home. The design of the frame door expresses a contemporary expression, thanks to the aluminium profiles available in white, anthracite and titanium and the possibility of creating striking material combinations with lacquered finishes, decorative melamines, veneered finishes or glass for the utmost flexibility in style. The new handles are a distinctive feature, particularly the curved tubular handle that sleekly outlines the door surface. A functional solution that turns into a decorative statement capable of adding identity and dynamism to the project. Another feature is the equipped laminate wall panel which, combined with an exclusive line of accessories, is a strategic and functional resource whose strength lies in aesthetics and versatility. The flexibility of this system is ensured by all the holes provided so that shelves, containers and small accessories can be fitted freely and their position can be changed as required.
